1. Terms and abbreviations	3
2. Scope	3
3. System requirements	4
4. Before installation	4
5. General information about installation.....	6
6. Database connection settings	7
6. Annex №1. SQL queries for creating tables in SQLite DB.	9
7. Annex №2. SQL queries for creating tables in MySQL DB.	14
8. Annex №3. SQL queries for creating tables in PostgreSQL DB.	20
9. Annex №4. SQL queries for creating tables in Firebird DB.....	26

1. Terms and abbreviations

ROM – permanent storage device.

RAM – random access memory.

OS – operating system.

DB – database.

DBMS – database management system.

2. Scope

This guide is intended for ALTIR administrators. Guide provides information about:

- preparation for installation and for using of application,
- installation of application,
- setting up a connection to non-default database,
- creating tables and indexes in a non-default database,
- launch of application.

3. System requirements

- Screen resolution of at least 1024*768 pixels.
- Windows, Linux or MacOS X operating system.
- Installed Java virtual machine with support of Java SE 8 (recommend Oracle JRE 8 or later).
- Free space in ROM: 500 Mb or more.
- Free space in RAM: 1 Gb or more.

4. Before installation

Before installing ALTIR it is recommended to perform the following operations if necessary:

- 1) Install Java Virtual Machine (as part of JRE) with support of Java SE 8.

For Windows and MacOS X:

JRE downloading page: <https://java.com/download/>

For Linux (Ubuntu):

To install JRE run command in terminal:

```
sudo apt install openjdk-8-jre
```

- 2) Install fonts.

For Windows and MacOS X: not required.

For Linux (Ubuntu):

Install one of Segoe UI, Arial, Noto Sans or Tahoma fonts.

To install fonts run commands in terminal:

Installation of Arial fonts:

```
sudo apt-get install ttf-mscorefonts-installer
```

Installation of Tahoma fonts:

```
wget  
https://gist.githubusercontent.com/maxwelleite/913b6775e4e408daa9045  
66eb375b090/raw/cbfd8eb70184fa509fcab37dad7905676c93d587/ttf-ms-  
tahoma-installer.sh -q -O - | sudo bash
```

Installation of Segoe UI fonts:

```
sudo mkdir -p /usr/share/fonts/truetype/msttcorefonts/
cd /usr/share/fonts/truetype/msttcorefonts/
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeui.ttf?raw=true -O segoeui.ttf # regular
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeuib.ttf?raw=true -O segoeuib.ttf # bold
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeuib.ttf?raw=true -O segoeuib.ttf # italic
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeuiz.ttf?raw=true -O segoeuiz.ttf # bold italic
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeuil.ttf?raw=true -O segoeuil.ttf # light
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/seguili.ttf?raw=true -O seguili.ttf # light italic
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/segoeuisl.ttf?raw=true -O segoeuisl.ttf # semilight
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/seguisli.ttf?raw=true -O seguisli.ttf # semilight italic
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/seguisb.ttf?raw=true -O seguisb.ttf # semibold
sudo wget -q
https://github.com/martinring/clide/blob/master/doc/fonts/seguisbi.ttf?raw=true -O seguisbi.ttf # semibold italic
fc-cache -f /usr/share/fonts/truetype/msttcorefonts/
```

3) Install DBMS, create and configure a database instance for non- default database. Create DB tables and indexes for ALTIR.

ALTIR supports SQLite (v3), MySQL (v5.6), PostgreSQL (v9.6) and Firebird (v3.0) databases.

Installation of DBMS, creation and configuration of database instance should be performed according to guides for those applications.

We recommend the following graphical interfaces for DBMS:

DBMS	GUI application	
SQLite	SQLiteDatabaseBrowser	
MySQL	phpMyAdmin	
PostgreSQL	Adminer	
Firebird	-	DBeaver

SQL queries for creating database tables and indexes are given in Annexes № 1,2,3,4.

5. General information about installation

ALTIR distributes in compressed file that contains a set of files required for the functioning of the application:

- executable file
(ALTIR_*.exe for Windows,
ALTIR_*.jar for Linux,
ALTIR_*.app for MacOS X);
- default database file (altir.sqlite3).

Application launch:

- 1) unpack compressed file into the folder (local folder, folder on a mapped network drive, or a network folder with shared access);
- 2) set read and write permissions for that folder (administrator privileges is not required);
- 3) to use non-default database you should create Altir_db_settings.ini file in the same folder and edit it according to instruction (see par. 6);
- 4) run (execute) the executable file.

ALTIR contains following built-in user accounts (account data is stored at database):

- Administrator account
Login: admin
Password: admin
- Guest account
Login: guest
Password: guest

6. Database connection settings

ALTIR uses `altir.sqlite3` file in application folder as the default database.

To change database connection settings you should place (create) text configuration file in UTF-8 encoding named `Altir_db_settings.ini` in folder of executable file of application. This file must contain description of at least one connection according to following pattern:

```
[connection title]
type = database type
link = database address
name = database name
schema = database schema
login = login
password = password
```

where:

connection title – an arbitrary string that will identify the connection in application interface;

database type – one of strings: MYSQL, POSTGRESQL, SQLITE, FIREBIRD, matched to the type of DBMS;

database address – 1) DBMS host's network address and port number in the form `//host:port/` (for MySQL, PostgreSQL, Firebird) or 2) absolute or relative address of the database file in file system (for SQLite);

database name – database name in DBMS (if necessary);

database schema – name of database schema in DBMS (if necessary);

login – name of DBMS user who has read and write access to specified database (if necessary);

password – password of specified user (if necessary);

Example:

```
[first database (mysql)]
type = MYSQL
link = //server1.local:3306/
name = altir_db
login = admin
password = adminpassword
```

or

```
[second database (postgresql)]
type = POSTGRESQL
link = //server2.local:5432/
name = altir_db_reserv_1
schema = public
login = admin
password = adminpassword
```

or

```
[third database (firebird)]
type = FIREBIRD
link = //server3.local:3050/
name = altir_db_reserv_2
login = admin
password = adminpassword
```

If file contains description of several connections, the application will prompt the user to select connection to be used.

Following description corresponds to default database:

```
[Default SQLite DB]
type = SQLITE
link = ./altir.sqlite3
```

6. Annex №1. SQL queries for creating tables in SQLite DB.

```

CREATE TABLE `service_info`
